

Hero MotoCorp — DCF Valuation Analysis

GitHub project report | FCFF-based valuation

Hero MotoCorp — DCF Valuation Snapshot

Metric	Base Case
Enterprise Value	₹156,037 Cr
Equity Value	₹170,284 Cr
Intrinsic Value / Share	₹8,514
Reference Market Price	₹5,000
WACC	10.23%
Terminal Growth	5.00%
Terminal Value / EV	83.3%

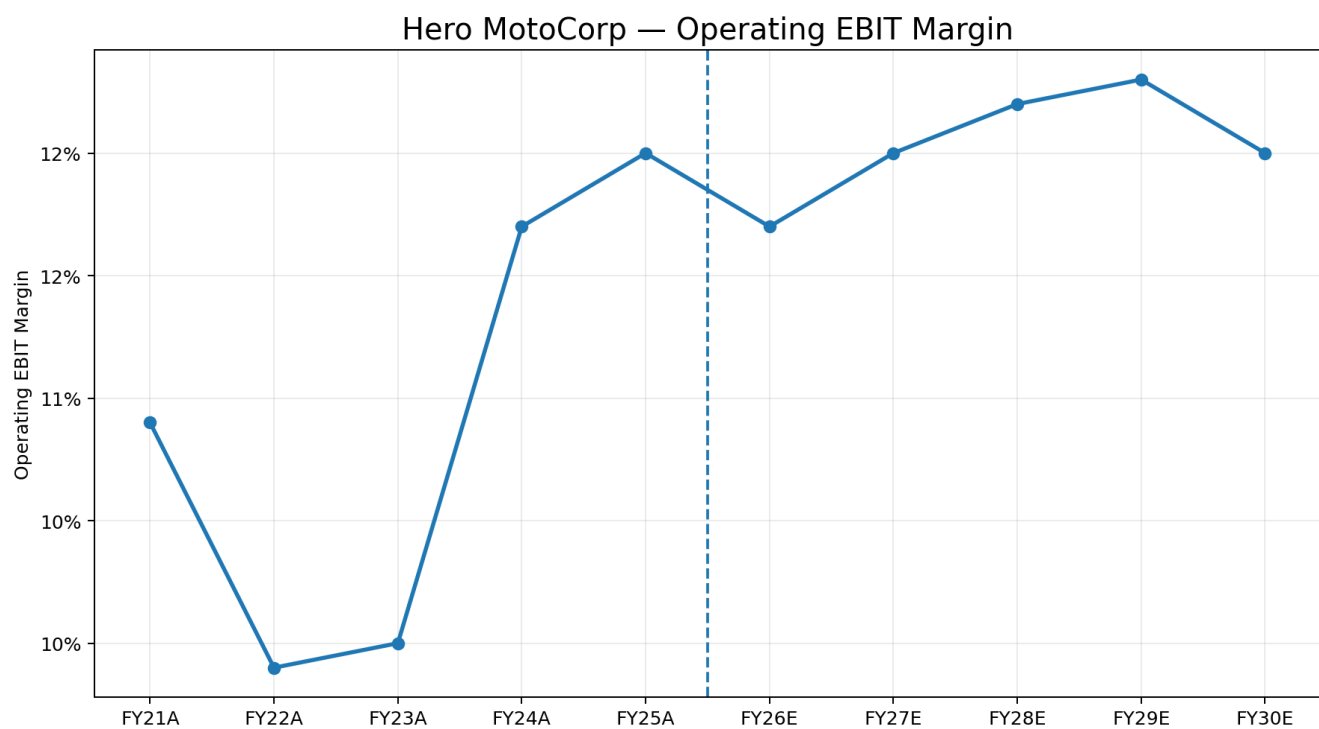

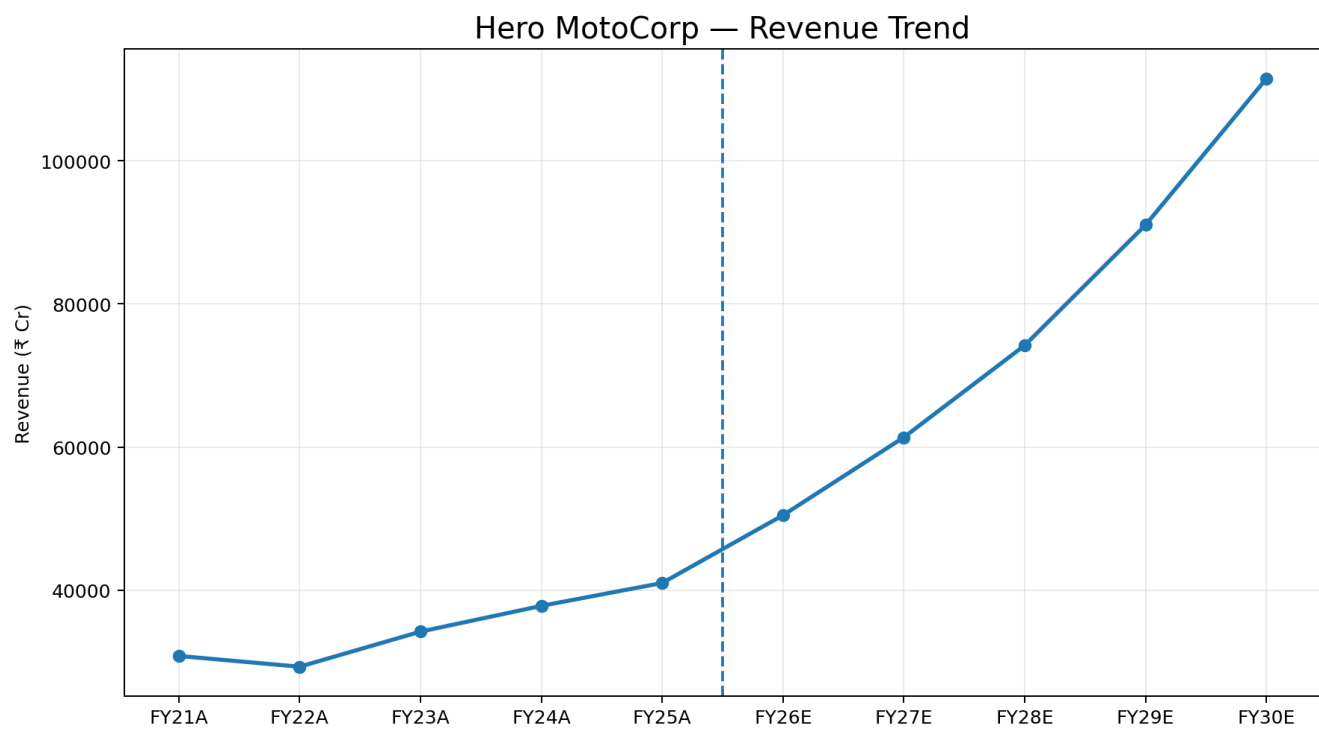

Executive Summary

This project presents an FCFF-based discounted cash flow valuation of Hero MotoCorp. The model forecasts operating performance and free cash flow, discounts projected FCFF using WACC, estimates terminal value using perpetual growth, and bridges enterprise value to equity value.

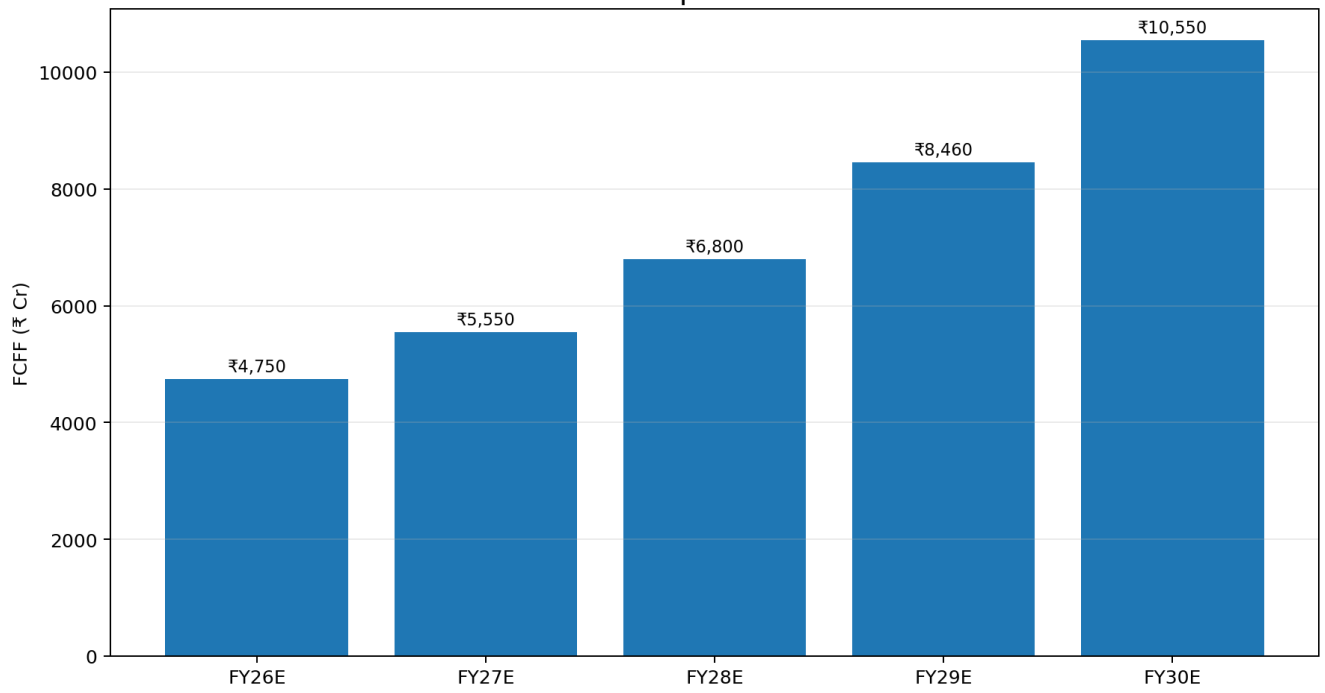

Base-case outputs

Metric	Base Case
Enterprise Value	■156,037 Cr
Equity Value	■170,284 Cr
Intrinsic Value / Share	■8,514
Reference Market Price	■5,000
WACC	10.23%
Terminal Growth	5.00%
Terminal Value / EV	83.3%

DCF Sensitivity

The sensitivity table illustrates how the implied value per share changes across different WACC and terminal-growth assumptions. The base case uses a 10.23% WACC and 5.00% terminal growth.

Important Limitations

The model is an analytical/educational valuation project and should not be treated as investment advice. DCF outputs are highly sensitive to forecast assumptions, discount rate, terminal growth and the treatment of cash, debt and other balance-sheet items. Historical and forecast figures should be independently verified against company filings before using the model for live investment decisions.
